Methodology: Passenger volumes and # of mandatory referrals captured from the CMRS reporting system. Passenger volume number represents the number of arriving passengers processed by CBSA only. Number of Targets and Lookouts extrapolated from Target/Lookout interception reports captured from the Integrated Customs Enforcement System. It bears noting that the number of Targets and Lookouts includes both customs and immigration Targets/Lookouts (the request only specified total Targets/Lookouts). As such, the number of both customs and immigration mandatory secondary referrals have been included as well.
